

"VERSION WITH MARKINGS TO SHOW CHANGES MADE"

4. (Amended) Device according to claim ~~2 or 3~~, **characterized in** that the end walls have two axially spaced walls (19, 37 and 20, 38, respectively) which, together with intermediate radially directed wall portions (39), define said passages (35, 36).

5. (Amended) Device according to ~~one of claims 1-4~~, claim 1, **characterized in** that the drive means are formed by a liquid turbine (30).

7. (Amended) Device according to ~~one of claims 1-6~~, claim 1, **characterized in** that the extent of the channel layers radially amounts to circa 20% of the radius of the first container (17).

8. (Amended) Device according to ~~one of claims 1-7~~, claim 1, **characterized in** that the radius of the first container (17) is circa 100 mm and its length circa 200 mm, that the container is designed to be driven at a rotational speed of circa 3 000 rpm, that the radial dimension (r) of the channels (34) is less than 1 mm, and that the outermost channel layer is located at a maximum radial distance from the rotational axis.
